

Heavy Duty Clamp Carriers

Heavy Duty 14-section Pneumatic Clamp Carrier

Heavy Duty 20-section Hydraulic Clamp Carrier

Standard or Heavy Duty?

Quick Machinery offers two complete lines of Clamp Carriers: Standard and Heavy Duty.

Our Standard machines (featured elsewhere) are designed for the mainstream cabinet, furniture or millwork shop. They are strong and durable, and can handle material up to 3" thick. Our Heavy-Duty machines (featured here) are designed for high-production applications and for clamping large, heavy material up to 16' long and/or up to 8" thick.

Heavy-Duty Clamping

Our Heavy-Duty Clamp Carriers feature massive frames, super heavy-duty zinc plated, full box-frame clamps with 20mm diameter full-length screws, 3,000 rpm clamp tighteners, pneumatic panel flatteners, electric motor drives with fully Automatic Rotation Cycles, and expandability up to 80 sections.

Reasonable Cost

Considering their extraordinary strength and longevity, our Heavy Duty Clamp Carriers are very reasonably priced.

(Please see more details on the reverse side of this sheet.)

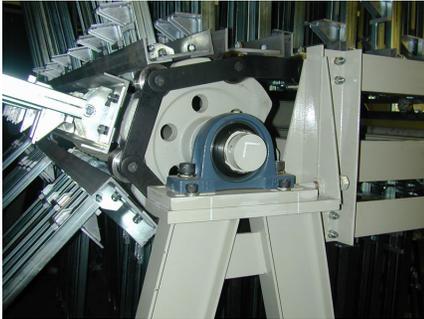

Value Leader in Gluing Equipment

Heavy Duty Clamp Carrier Features

Massive, Expandable Frames

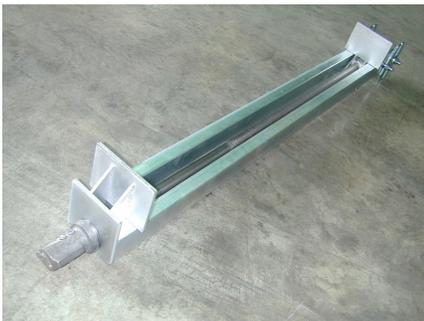

Our Heavy Duty Clamp Carrier frames are the strongest in

the industry, featuring oversize frame rails and runways, massive 3" diameter front and rear shafts (large-diameter shafts resist twisting when the Carrier is being indexed from section to section by the drive motor; 3" shafts are 4 times stiffer and stronger than 2" diameter shafts), big cast iron sprockets, heavy-duty chains with 2" wide rollers, and extra-stout 6" I-beam legs. Machines are available to handle stock up to 20.5' long and 8" thick. Frames are expandable to up to 80 sections.

Super Heavy-Duty Clamps

Our Heavy Duty Clamp Carriers feature industrial-duty,

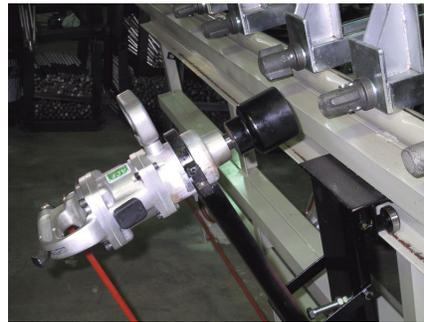

corrosion-resistant, zinc-plated steel clamps with full box frame construction and 20mm diam-

eter full-length screws. The clamp jaws are 3-1/2" or 6" high, and angled inward one degree to keep stock held down securely in the clamps. Rocker Plates for face gluing are available, if desired. Quick-adjusting (short screw) clamps are also available.

Pneumatic or Hydraulic Clamp Tighteners

Our 3,500 rpm Pneumatic Clamp Tightener is five to ten times faster than clamp tighten-

ers from competing manufacturers. Our super-fast Pneumatic Clamp Tightener and full-length

clamp screws eliminate the need for manual rear jaw adjustment. All adjustment is made quickly by the Clamp Tightener itself.

Our Hydraulic Clamp Tightener is powerful (up to 4,600 lbs. of clamping force per clamp), precise, quiet, and virtually maintenance-free.

Pneumatic Panel Flattener

Each of our Standard Clamp Carriers includes an easy-to use Pneumatic Panel Flattener.

Electric Motor Drive with Automatic Rotation Cycle

Our Heavy Duty Clamp Carriers feature quiet and efficient Electric Motor Drives for Carrier Rotation. With the press of one button, the entire rotation sequence (reverse rotate, front rest out, forward rotate, front rest in, lay clamps perfectly on front rest every time) happens automatically.

High Productivity, Super Durability

QUICK Heavy Duty Clamp Carriers are the fastest, heaviest-duty, most durable Clamp Carriers in the world.
